

PHP LAMP Web Developer

Jellymedia is a small, friendly web design and development firm specialised in the video games industry, with a national client base including Nintendo, Sega & Konami and many smaller organisations. We specialise in the development of bespoke websites in the games industry, and are looking to expand our team.

Main duties and responsibilities

The prime focus of this role is web development in PHP (OOP), as well as using XML & MySQL. The role involves more than just front end website development as there is also the requirement to develop and maintain databases and develop APIs for working with partners.

Skills

- Effective day to day management of website projects.
- Delivery of websites, from simple brochure sites through to large e-comms and complex web apps.
- You will be responsible for numerous projects from different clients.

Experience

Excellent in PHP (OOP), MySQL, HTML, CSS, XML, JQuery, & Ajax

Personal Attributes

- Able to work under pressure to very tight deadlines, with a strong focus on achieving results.
- Can work without supervision to strive to better targets
- Team player

Salary

Package dependant on experience both Junior and Senior candidates will be considered.

We offer an interesting and challenging working environment with the opportunity to take on responsibilities for parts of the growing business. You will be working on projects both internally and externally for clients.

If you feel you have the right skills please send your CV, samples and a covering letter including expected salary to jobs@jellymedia.com
